

MBA – Information Security/Assurance

The MBA Information Security/Assurance program allows the graduate students to take a deeper dive into the realms of business continuity, incident response, cyber science and other aspects of IT business operations. No company is without an IT/IS function and the language of business requires a grasp of the IS landscape. The students exiting this program will be able to translate business and functional dynamics necessary in today's environment. The program was developed and updated in collaboration with students and successful industry leaders, enabling our diverse student body to advance in their professional careers by attaining business competencies as well as leadership, strategic and creative thinking skills in the ever-changing global business environment.

The MBA Information Security/Assurance program allows the graduate students to take a deeper dive into the realms of business continuity, incident response, cyber science and other aspects of IT business operations. No company is without an IT/IS function and the language of business requires a grasp of the IS landscape. The students exiting this program will be able to translate business and functional dynamics necessary in today's environment. The program was developed and updated in collaboration with students and successful industry leaders, enabling our diverse student body to advance in their professional careers by attaining business competencies as well as leadership, strategic and creative thinking skills in the ever-changing global business environment.

Upon completion of the program, graduates are expected to:

- Gather, interpret and analyze research to inform decision making at operational and strategic levels of an organization.
- Use advanced communication skills and awareness of cultural differences in global and domestic business interactions.
- Analyze problems from a diverse perspective, propose effective solutions and evaluate the impact of executive decisions.
- Assess and evaluate business entities taking into account cross-functional environments as they affect ethical decision making in domestic and global organizations.
- Integrate information security solutions through the alignment of appropriate security methodologies to different security situations.
